An app for engineering students

It will help them find jobs, internship projects

R. SUJATHA
CHENNAI

Engineering students have an app to help them find jobs, internship or even research projects. The app offers opportunities to faculty to link with industry, students and trade bodies.

Users can access the D4EClub by downloading it on the Android and iOS platforms. But to log in, one must register at www.d4e.in. Once the administrator approves the registration, the user can log in through the app and post on any relevant field of interest. Dedicated spaces for industry, students, colleges, faculty, experts, government bodies, internship and job seekers have been provided. Registered users can post their questions and requirements and chat.

It offers space for overseas institutions and individuals based abroad to stay in touch with the talent pool of engineers in India.

K.E. Raghunathan, a first-generation entrepreneur, whose brainchild it is, said: "Digitally for engineers is a club that offers 19 services targeted at students in tier 2 and tier 3 engineering colleges. There will be a nominal annual fee for registering." The management team includes G. Ramasubramanian, founder-director of e-Brahma Technologies; Prasad Kolisetty, promoter of IT training and services company 3Edge Solutions; and R. Mohanraj, member of the Indian Society for Technical Education.
